

Foreward

Jiangsu VTS user manual is issued by Jiangsu MSA which is based on regulations and laws such as safety administration code of Vessel traffic service of PRC, safety administration code of Vessel traffic service of Jiangsu maritime safety administration. This manual is intended to secure shipping safty, improve traffic efficiency, protect water environment and improve communication and coorporation between VTS centers and users by providing users of Jiangsu VTS with information of Jiangsu VTS system, administrative requirements and service within Jiangsu VTS area and navigation circumstance necessary for users.

JiangSu VTS User Manual

Description of Jiangsu VTS

Jiangsu VTS is consist of one coastal VTS Lianyungang VTS center and six VTS centers alongside Jiangsu section of Yangtze river which are Nanjing, Zhenjiang, Taizhou, Jiangyin, Zhangjiagang and Nantong.

1. System performance

Performance of Coastal Lianyungang VTS:

1) Radar Surveillance System: 24 miles coverage area, with function of tracking target automatically and replay.

2) Data-processing system: capable of processing data up to one hundred thousand vessels.

3) VHF radio system: 25 miles coverage area, with function of multi-channel record.

4) Automatic Identification System: 30 miles coverage area, with function of identifying and locating vessels automatically.

5) CCTV monitoring system: as an auxiliary way to monitor ship movements.

6) Meteorological system: to observe real-time meteorological data under all weather conditions.

Performance of Jiangsu section of Yangtze River VTS which is comprised of twenty-three radar stations.

1) Radar Surveillance System: 12 miles coverage area, with function of tracking target automatically.

2) Data-processing system: capable of processing data up to one hundred thousand vessels.

3) VHF radio system: 20 miles coverage area, with function of multi-channel record.

4) Automatic Identification System: 20 miles coverage area, with function of identifying and locating vessels automatically.

5) CCTV monitoring system: to assist radar system with monitoring ship

movements/ as an auxiliary way to monitor ship movements.

6) Meteorological system: to observe real-time meteorological data under all weather conditions.

2. Service Target

Vessels which are required to participate in VTS by maritime safety administration agency and to carry ship communication equipments in line with referred international conventions and national regulations.

	Category One	Category Two
Coastal waterway	All foreign ships and Chinese ships of 300gross tonnage and upwards	
Jiangsu section of Yangtze River	1)Ships of international voyage; 2) Passenger ships ;3)All ships of 1000 gross tonnage and upwards on national coastal voyage and carrying hazardous goods ;4)All other inland waterway ships of 1600 gross tonnage and upwards or all inland waterways towing fleets with engine power of 1500kw and upwards (harbor tugs exemption).	All other ships not involved in Category One

3. Jiangsu VTS Area

1) Lianyungang VTS area defined :refer to Lianyungang VTS user manual.

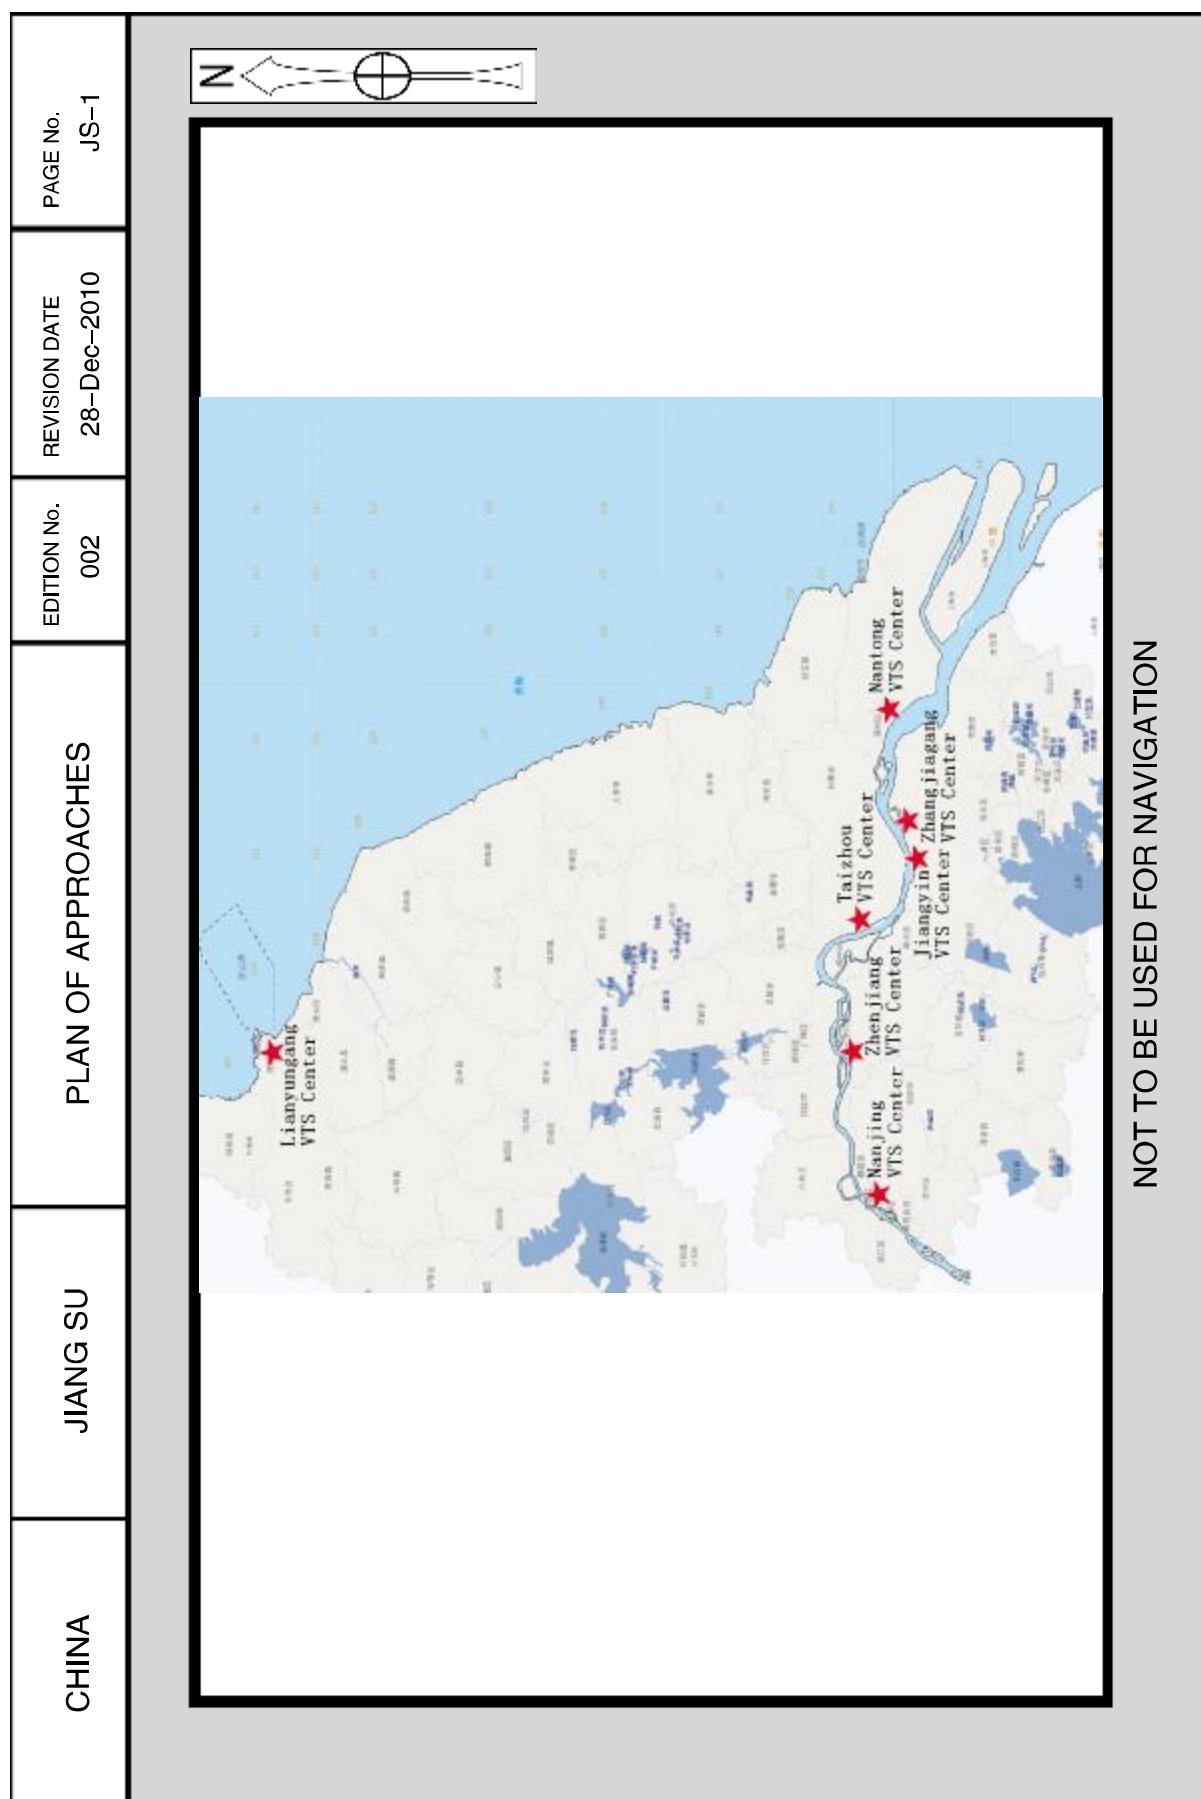

2) Jiangsu section of Yangtze River VTS area defined: water area starting from connecting line between Cihu estuary and Wujiang estuary extending downwards to connecting line between Liuheiwa and Shiqiao estuary beacon(from buoy No.1 to buoy No.158).

4. Working Language: Mandarin or English

5. Working Time: 0000–2400hrs

6. Legislative Basis

The Legislative basis for Jiangsu VTS are Maritime Traffic Safety Law of the People's Republic of China, regulations of PRC concerning the administration of traffic safety on inland waters, safety administration code of vessel traffic service of PRC, the provisions of ship's routing system at Jiangsu section of Yangtze River, safety administration code of vessel traffic service of Jiangsu maritime safety administration, maritime safety administration code of Lianyungang.

CHINA	JIANG SU	PLAN OF APPROACHES	EDITION No. 002	REVISION DATE 28-Dec-2010	PAGE No. JS-2
Ship reporting					
Report categories		Content of report			
Position report is required when vessels transiting through regulated reporting line		<p>Position report: ship's name (call sign), nationality, registry port (only for Chinese vessel), length, gross tonnage, draft, carriage condition, departure port or last port /next port of call and other information enquired by VTS center.</p> <p>Ships equipped with AIS shall only report ship's name (call sign) and nationality if AIS always operates in order and is updated timely and accurately.</p>			
Ship movement report is required when vessels transiting through regulated position check point.		<p>Report at position check point: ship's name, position, course etc.</p> <p>Dropping and anchoring report:</p> <ul style="list-style-type: none"> Report after dropping anchor: ship's name, anchorage. Report before anchoring: ship's name, position, course. Berthing and leaving report: Before berthing (buoys): ship's name, berth/buoy's name. Before leaving berth: ship's name, berth/buoy's name, course. 			
Special report		<p>1) Ship movement report is required before and after ship transiting through one-way restricted channel.</p> <p>2) Deviation report is required when masters or pilots deviate referred navigation regulations in case of emergency endangering lives and properties or environment.</p> <p>3) Distress report is required when any traffic accident, pollution incident, loss of propulsion, or people in distress happened or observed.</p> <p>4) Abnormal situation report is required when abnormality of aids to navigation, obstruction against navigation safety and any circumstances obstructing navigation safety observed.</p>			
Ps: Special report are applied to ships in category one and two; other report categories are only applied to ships in category one.					

CHINA	JIANG SU	PLAN OFF APPROACHES	EDITION No. 002	REVISION DATE 28-Dec-2010	PAGE No. JS-3
Vessel traffic service					
VHF working channel		Traffic service			
<p>1. VHF radio channel 16 is used for bridge to bridge communication and emergency communication at coastal water area. Lianyungang VTS center could be contacted on channel 69.</p> <p>2. VHF channel 06 is used for bridge to bridge communication and channel 69 is used for public information and listening watch channel when ships sailing at Jiangsu section of Yangtze River. Followed by working channel of different VTS.</p> <p>Nanjing VTS center could be contacted on channel 11 (waterarea above Nanjing Yangtze River bridge) or channel 10(downwards of Nanjing Yangtze River bridge).</p> <p>Zhenjiang VTS center could be contacted on channel 09 or 10.</p> <p>Taizhou VTS center could be contacted on channel 09.</p> <p>Jiangyin VTS center could be contacted on channel 10.</p> <p>Zhangjiagang VTS center could be contacted on channel 10 (below Sutong Yangtze River bridge) or channel 11 (above Sutong Yangtze River bridge)</p>				<p>Folloived traffic service provided by Jiangsu VTS</p> <p>1. Information broadcasting.</p> <p>Information referred to navigation safety of ships in VTS area.</p> <p>Information service. VTS center could provide the following information service based on information observed on ship's request.</p> <ol style="list-style-type: none"> 1) Movement of other ships. 2) Information of waterway and aid to navigation. 3) Information of hydro-meteorological information. 4) Information of navigation warning/notice to mariners. 5) Other information. 3. Traffic organization service. <p>Ships could request VTS to provide service when the following happened.</p> <ol style="list-style-type: none"> 1) Transiting through bridge area, harbor area, bending waterway, traffic intensive area or areas in restricted condition. 2) Berthing and leaving dock or entering and departing anchorage area for super-large vessel. 3) Entering or leaving docks for maintained and new-built ships. 4) Loss of steering or propulsion for navigating ships <p>VTS center could provide traffic organization service based on reality such as traffic flow, navigation circumstance and ships movement at harbor.</p> <ol style="list-style-type: none"> 4. Navigational assistance. 1) VTS could provide navigational assistance service on request during conditions of restricted visibility, adverse weather, failure of navigation aid or other hazardous circumstances. 2) VTS center should confirm start and close of service with ships timely. 5. Allied activities assistance. <p>VTS center could provide information about salvage or clearing pollutant etc. and assist with water search and rescue action upon ship or relevant organization and people's request.</p>	

CHINA	JIANG SU	PLAN OF APPROACHES	EDITION No. 002	REVISION DATE 28-Dec-2010	PAGE No. JS-4
Navigation rules		Pilot			
1. All ships navigating, operating and anchoring in Lianyungang VTS area must comply with Maritime Traffic Safety Law of the People's Republic of China and maritime safety administration code of Lianyungang. 2. Ship's routing system is applied in Jiangsu section of Yangtze River. All ships navigating, operating or anchoring in Jiangsu section of Yangtze River must comply with Codes for Preventing Collisions on Inland Waters of PRC, the regulations on the ship's routing system in Jiangsu section of Yangtze River and other relevant regulations.		1. The following ships navigating in Jiangsu section of Yangtze river shall apply pilot. 1) Foreign ships. 2) Sea-going ships of 1000 gross tonnage and upwards, exemption of ships maneuvered by the same master and navigating in the same inland water area twice in two months. 3) Ships restricted in her manoeuvre. 4) Ships carrying passengers or hazardous goods should apply for pilotage to comply with rules regulated by by the department in charge of transportation under the State Council. 2. Compulsory pilotage is applicable to foreign ships navigating coastal Lianyungang VTS area.			

Brief Introduction of Lianyungang VTS

Lianyungang VTS is comprised of two stations and one center involving Qitaishan radar station, Liandao radar station and Lianyungang VTS center.

Lianyungang VTS center

Liandao radar station

Qitaishan radar station

Container Terminal

System description

Lianyungang VTS Center

Postcode:222042

Post address: No.11,

Fax: 0518-82310309

Tel: 0518-82231894、0518-82231904

Ships applicable:

All foreign ships and Chinese ships of 300 gross tonnagenage and upwards and vessels required to participate to VTS by maritime safety administration agency.

VTS Area

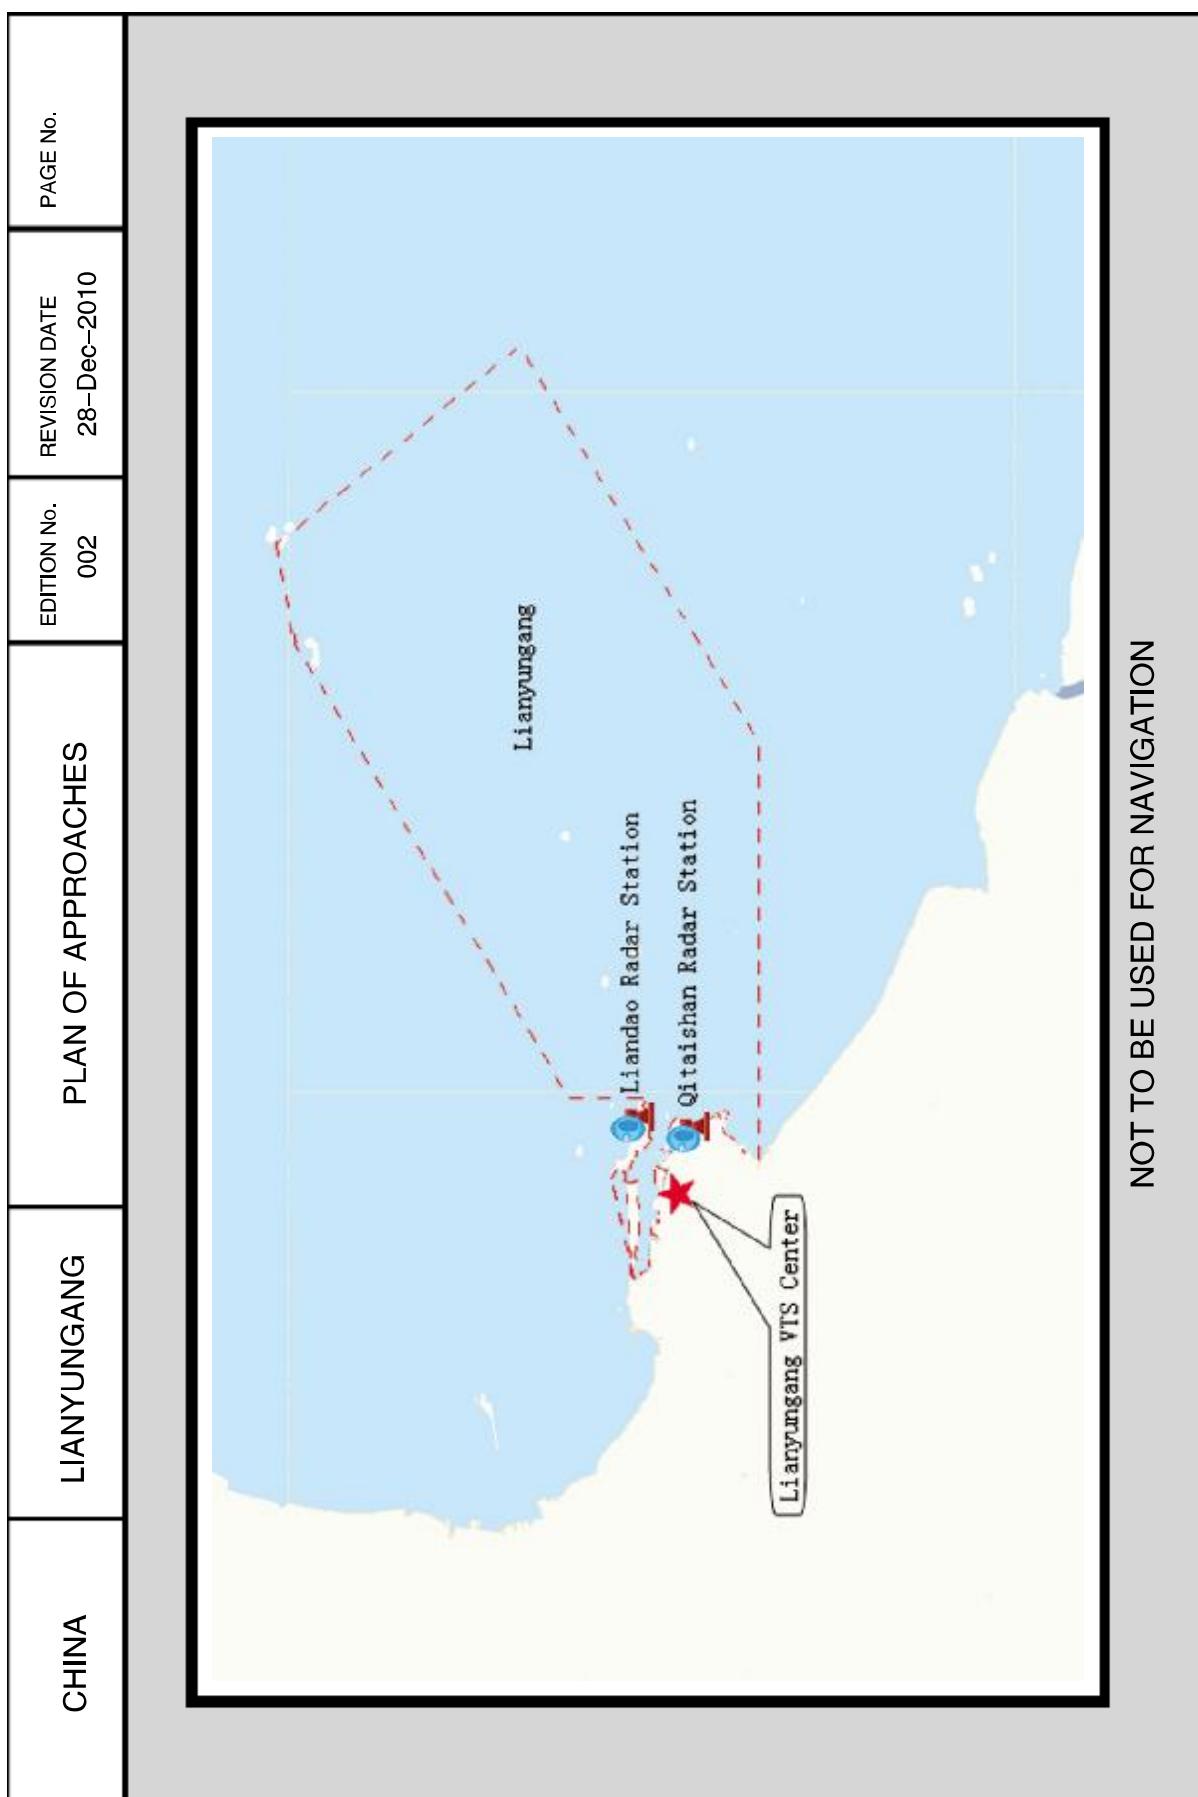

Lianyungang VTS area is comprised of two major parts:

a) Lianyungang inner water area which is bounded by east bound connecting Qitaizui and Yangwotou and west bound connecting Beiyingzui and Xiaoguitou and coast line between east and west bound.

b) water area is bounded by connecting line of following seven geographical positions: Yangwotou ($34^{\circ} 45' 21''$ N, $119^{\circ} 29' 37''$ E), position three miles away north of Yangwotou ($34^{\circ} 48' 21''$ N, $119^{\circ} 29' 37''$ E), Cheniushan ($34^{\circ} 59' 45''$ N, $119^{\circ} 49' 17''$ E), Dashandao ($35^{\circ} 00' 30''$ N, $119^{\circ} 53' 26''$ E), $34^{\circ} 50' 28''$ N, $120^{\circ} 01' 57''$ E, $34^{\circ} 50' 28''$ N, $120^{\circ} 01' 57''$ E.

Legislative Basis

Lianyungang VTS center provides vessel traffic service and management and assists allied actions based on Maritime Traffic Safety Law of the People's Republic of China, safety administration code of Vessel traffic service of PRC, safety administration code of Vessel traffic service of Jiangsu maritime safety administration, maritime safety administration code of Lianyungang.

CHINA	LIANYUGANG	PLAN OF APPROACHES	EDITION No. 002	REVISION DATE 28-Dec-2010	PAGE No. LYG-3
Routing rules					
Route : Lianyungang route consists of channel for 150 thousand DWT ships, old harbor channel, Xugou channel and Kangyun oil wharf channel.					
Two-way navigation Ships applicable to two-way navigation 1. Roll-on-roll-off ship, oil tanker, LPG and bulk liquid chemical tankers which of 165m or less in length, and the sum of width of two meeting ships is less than 47 meters. 2. Other ships of 200m or less in length, and the sum of width of two meeting ships is less than 57 meters. Route applicable to two-way navigation: route for 150 thousand DWT ships					
Pilot: compulsory pilot is required for foreign ships entering or leaving port.					
Speed: speed is less than 12 knots when navigating in waterway. Large container ships could be over speed limit properly in waterway; low speed is required when meeting or transiting through construction area.					
Overtaking: overtaking in waterway is prohibited for foreign ships and Chinese ships of 300 gross tonnage and upwards.					
Collision avoidance: Chinese ships of less than 300 gross tonnage navigating in waterway shall give way in advance for foreign ships and Chinese ships of 300 gross tonnage and upwards; Ships bypassing, entering and leaving waterway shall avoid to interfere navigation of foreign ships and Chinese ships of 300 gross tonnage and upwards; Navigating ships should avoid to interfere turn of foreign ships and Chinese ships of 300 gross tonnage and upwards.					
Anchorage: vessels anchoring in Lianyungang anchorage shall comply with relevant rules issued by maritime administration agency.

13 knots in other months. The top speed of upstream vessels shall not exceed 12 knots. The top speed of upstream vessels shall not exceed 9 knots and downstream vessels shall not exceed 12 knots when navigating through upper and lower estuary of Yizheng waterway, Baota waterway, water area between buoy No.136 and No.138.

The top speed of upstream vessels shall not exceed 15 knots from May 1 to October 31 navigating in other water area.

The top speed of downstream vessels shall not exceed 13 knots and upstream vessels shall not exceed 12 knots in other months navigating in other water area.

The speed shall not be less than 4km per hour when vessels navigating in Jiangsu section of Yangtze River.

5.Restrictions of turning round: all vessels are prohibited turning round at the water area of Dashengguan high-speed railway bridge, Nanjing third bridge, Nanjing bridge and South branch Nanjing Second bridge of Yangtze River and Ningpu ferry Tianhekou. Vessels or fleets with the length above 110 meters are prohibited turning round at the water area of Banqiao ferry.

NANJING		PLAN OF APPROACHES	EDITION No. 002	REVISION DATE 28-Dec-2010	PAGE No. NJ-4
Routes					
Name	Location	Description			
Main route	Main water area of Yangtze River between line connecting Cihu estuary and Wujiang estuary and line connecting Xinhekou and Shierwei funnel, the main lane is the deepwater lane of 500 meters in width from No.158 red buoy to No.119 black buoy.	The depth of main route below Yanziji is 10.5 meters, main route above Yanziji with the depth of 9 meters in the period of June to September, with the depth of 7.5 meters in the period from October to next May.			
Auxillary routes	North side of black buoys between Xin estuary (down boundary) and lower estuary in Baota waterway.	With the width of 200 meters and the depth of 5.0 meters.			
Wujiang waterway	Water area starting from connection line between Wujiang estuary and Cihu estuary downwards to connection line between Daqianshan tower-shape beacon and two-way traffic buoy below Wujiang waterway.	One-way navigation is applied to the whole Wujiang waterway which is one-way route for up stream small vessels and fleet. Any down stream vessels is prohibited to pass through this waterway. The depth of route is 4.5 meters.			
Dashengguan waterway	Starting from connection line between the head of Meizizhou and the electricity mark below the south bank downwards to connection between the rear of Meizizhou and the upper end of Sancha estuary.	All vessels are prohibited navigating into Dashengguan waterway.			
Baota waterway	The upper boundary is 270 degree end line of Xifangjiao triangulation point in the head of Baguazhou and the lower boundary is 090 degree end line of Tianhekou triangulation point.	Current is turbulent during flooding season with high traffic density in the vicinity of lower section of Baota waterway. It is hard to control the ship position. There is a shoal in the vicinity of lower section of Yangtze exclusive fairway. Three ferry lines are located in Baota waterway. Sharp look out are required.			

CHINA		NANJING		PLAN OF APPROACHES		EDITION No.	REVISION DATE	PAGE No.		
Name	Location	Description								
Anchorage and berthing area										
Nanjing joint inspection anchorage	South side of connection line between Changjiang red buoy No.122 red buoy and No.123 in Yizheng waterway, with the length of 3000 meters and the width of 400 meters.	For anchorage, quarantine of large vessels.								
Yizheng anchorage for oil tanker	South side of connection line between Yangtze River red buoy No.122 red buoy and No.123 in Yizheng waterway. Upper section with the length of 1900 meters and the width of 230 meters to 350 meters, lower section with the length of 1700 meters and the width of 400 meters.	For ship-to-ship transfer and anchorage of oil tanker.								
Anchorage of Yizheng chemical factory	North of water area from black buoy No.126 to No.127 in Longtan waterway.	For small vessels.								
Wuyuzhou anchorage	North of water area from black buoy No.127 to No.129 in Longtan waterway. With the length of 3297 meters, upper section with the width of 288 meters, lower section with the length in width of upper part and 523 meters in width of lower part.	For sea-going ships								
Qixia anchorage for oil tanker	Northside of connection line between location 800 meters downward of Nanjing fourth Yangtze River bridge (proceeding) to black buoy No.132 in Longtan waterway.	North of water area from location 800 meters downward of Nanjing fourth bridge (on construction) to black buoy No.133 for ship-to-ship transfer; north of water area from black buoy No.133 to No.132; for anchorage of oil tanker and oil barge.

Brief Introduction of Zhenjiang VTS

Zhenjiang VTS system is consist of VTS center and four main radar stations: Shi yezhou station、Zhengrunzhou station、Dasha station and Fudewei station.

Zhenjiang VTS center

Shiyezhou radar station

Dasha radar station

Zhengrunzhou radar station

Fudewei radar station

Liuwei estuary microwave relay station

System Description

Zhenjiang VTS Center

Post code: 212002

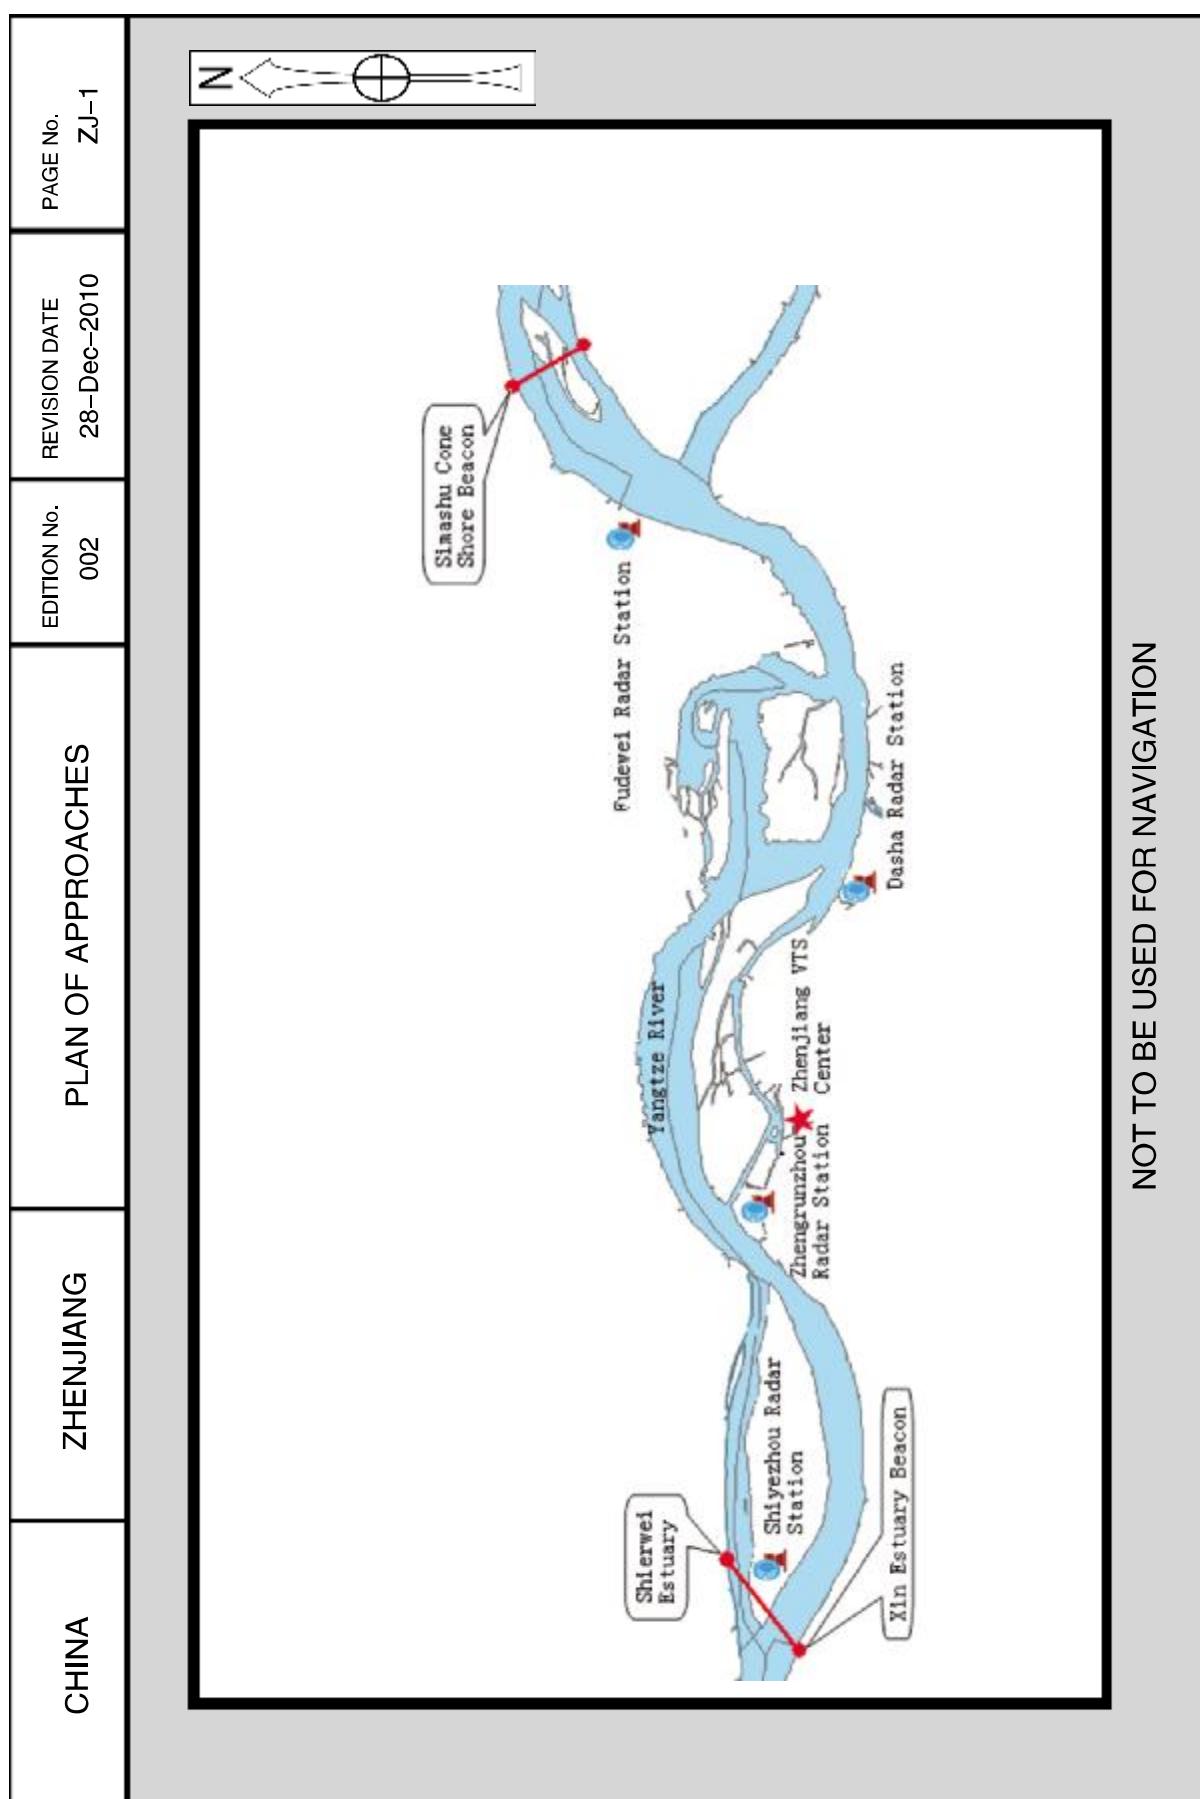

Address: No.8 Changjiang Rd, Zhenjiang, Jiangsu Province

Fax:(0511)85306100

Tel:(0511)85286914、(0511)85306110

VTS Area

Starting from connection line between Xin estuary tower-shape beacon and ShierWei beacon extending downwards to connection line between Simashu cone shore beacon and the opposite bank (Yangtze River #119 buoy to #91-1 buoy), besides of Yizheng and Taipingzhou shortcut waterway.

Vessels shall navigate with safe speed and caution in water area described above. The top speed of downstream vessels shall not exceed 1.5 knots May 1 to October 31 and not exceed 1.3 knots in other months. The top speed of upstream vessels shall not exceed 12 knots.</p> <p>The top speed of upstream vessels shall not exceed 9 knots and downstream vessels shall not exceed 12 knots when navigating through upper and lower estuary of Baicao waterway, water area between black buoy No.20 and Sutong bridge buoy No.1 in Tonghousha waterway.</p> <p>The top speed of upstream vessels shall not exceed 15 knots from May 1 to October 31 navigating in other water area.</p> <p>The top speed of downstream vessels shall not exceed 13 knots and upstream vessels shall not exceed 12 knots in other months navigating in other water area.</p> <p>The speed shall not be less than 4km per hour when vessels navigating in Jiangsu section of Yangtze River.</p> <p>2. Restrictions of overtaking: Vessels overtaking at Sutong Bridge are prohibited. Vessels of 3000 gross tonnage and above, fleets of 3000 deadweight and above are prohibited overtaking at the water area of Haifai Ferry, Tongchang Ferry and Tongsha Ferry. Vessels shall avoid overtaking at the water area of the lower estuary of Tianshenggang Special Channel of Nantong.</p> <p>3. Restrictions of turning round: All vessels are prohibited turning round at the water area of the estuary of Tongy River, Tonghang Ferry, Sutong Bridge and the lower estuary of Yinghanggang Special Channel. Vessels or fleets with the length above 110 meters are prohibited turning round at the water area of Taihai Ferry.</p>		

CHINA		NANTONG		PLAN OF APPROACHES		EDITION No.	REVISION DATE	PAGE No.
						002	28-Dec-2010	NT-3
Description								
Name	Location							
Main route	From buoy No.1 to No.36			Main route is comprised of Liuhaisha waterway, Nanlong waterway, Tongzhousha waterway, Baimaoshaha waterway and Liuhe waterway.				
North Baimaoshaha waterway	From buoy No.1 to buoy No.12 in North Baimaoshaha waterway			North Baimaoshaha waterway is special route for vessels navigating inland, with the depth of 4.5 meters below the theoretical lowest tide level, the narrowest width of 600 meters.				
Changshu harbor special purpose route	two-way traffic buoy No.13 to buoy No.16			Southside of Sutong bridge main route, with the depth of 7.0 meters below the theoretical lowest tide level, the width of 200 meters.				
Yongtai special purpose route	From buoy No.1 to No.9 in Yongtai special purpose route			Westside of Tongzhousha waterway and starting from Yonglian wharf downwards to two-way traffic buoy No.6 of Sutong bridge water area, with length of 15 km, depth of 10 ~22 meters, marked depth of 10.5 meters, width of 300 meters up buoy No.4 of Yonggang and 200 meters at Changshu anchorage section (from Yonggang buoy No.1 to No.4)				
Yingchuangang special purpose route	From Ying buoy No.1 to No.11			From two-way traffic buoy No.5 of Sutong bridge water area to Y red buoy No.11 with length of 16.8 km, the depth of section from two-way traffic buoy No. 5 of Sutong bridge water area to Nannongzha (Y buoy No.7, up Jiangshan agriculture and chemical wharf) is 10.5 meters and the width is 260 meters; the section from Nannongzha to Xinkaizha (Y buoy No.9, down Zhongtian Technical wharf) with depth of 8.0 meters and width of 260 meters, the section from Xinkaizhai to Y buoy No.11 with depth of 5.0 meters and width of 150 meters. The depth above is below the theoretical lowest tide level				
Tianshengang special purpose route	From Tian buoy No.1 to No.13			Route from Tian buoy No.1 to Xiaoli gang estuary with length of 18.1 km, the depth of -5 meters (theoretical level) and width of 150 meters. Tian buoy No.1 is single black buoy, No.2 and No.3 are single red buoy, No.4 to 9 are couple buoys, No.10 is single red buoy.

Water area of ferry					
Name	Location	Description			
No.1 Taicang anchorage for sea-going vessels carrying hazardous goods	North side of connection line between black buoy No.6 and No.7 in Liuhe waterway with length of 3000 meters and width of 800 meters.	For sea-going vessels.			
No.1 A Taicang anchorage for vessels carrying hazardous goods	North side of connection line between black buoy No.1 and No.2 in Liuhe waterway.	For vessels carrying hazardous goods.			
No.1 B Liuhe anchorage for sea-going vessels in Taicang	North side of connection line between black buoy No.2 and No.3 in Liuhe waterway with length of 3000 and upper width of 1000 meters and lower width of 1370 meters.	For sea-going vessels.			
No.2 Changshu anchorage for sea-going vessels	North side of connection line between black buoy No.12 in Bainmaosha waterway and black buoy No.2 in Sutong bridge waterarea with length of 4800 meters and width of 700 meters.	For sea-going vessels.			
Changshu down anchorage for sea-going vessels	North side of connection line between black buoy No.9 and No.12 in Bainmaosha waterway.	For sea-going vessels.			
No.3 Changshu harbor for ship-to-ship transfer	Central Tongzhousha waterway (Changshu harbor special purpose route) with length of 4000 meters and width of 700 meters.	For vessels waiting for berth or transfer.			
No.4 Nantong anchorage for vessels carrying hazardous goods	North side of connection line between buoy No.23 and 25. with length of 2492 meters and width of 872 meters.	For vessels carrying hazardous goods.			

CHINA		NANTONG	PLAN OF APPROACHES	EDITION No. 002	REVISION DATE 28-Dec-2010	PAGE No. NT-4
Name	Location		Description			
No.5 Nantong anchorage for joint inspection	North side of connection line between black buoy No.25 and 26 with length of 2500 meters and width of 600 meters.		For inspection.			
No.7 Nantonggang anchorage 2-a	South side of connection line between red buoy No.28-1 and No.30.		Anchorage is divided into four berthing areas. No.1 berth area is located at South side of upper anchorage with accommodation of barges or temporary berthing of two 2000dwt sea-going ships. No.2 berthing area is located at left side of lower anchorage with accommodation of berthing of 3000DWT barge. No.3 berthing area is located at right side of lower anchorage for 500 DWT barge. No.4 berthing area is located at right side of upper anchorage for 3000 DWT barge.			
Nantong anchorage for sea-going vessels transferring cargo No.8	South side of red buoy No.32 to No.33 in Nantong waterway, with the length of 2900 meters and the width of 1000 meters.		For sea-going vessels.			
Zhangjiagang(Longsha) anchorage for sea-going vessels	South side of red buoy No.33-34 in Nantong waterway, with the length of 2000 meters and the width of 600 meters.		For sea-going vessels.			
Berthing area No.1	South side of the fairway upstream Tonglu estuary, with the length of 2000 meters and the width of 200-500 meters.		For small vessels.			
	East side of connection between Changjiang black buoy No.3 and black buoy No.2 in Paimaosha waterway, with the length of 4000 meters and the width of 900 meters.		For large vessels.			

CHINA		NANTONG	PLAN OF APPROACHES	EDITION No. 002	REVISION DATE 28-Dec-2010	PAGE No. NT-5
Name		Location	Description			
Berthing area №.2		North side of connection between Changjiang black buoy No.7 and №.9, with the length of 2500 meters and the width of 900 meters.	For large vessels.			
Berthing area №.3		North side of connection between black buoy №.10 and №.12 in North Baisha waterway, with the length of 5000 meters and the width of 800 meters.	For large vessels.			
Berthing area №.4		Changsu waterway inlet, with the length of 3500 meters and the width of 500 meters.	For large vessels.			
Berthing area №.5		West side of connection line between Changjiang red buoy №.21 and 24, with the length of 6000 meters and the width of 1000 meters.	For large vessels.			
Berthing area №.6		East side of connection line between Changjiang black buoy №.23 and №.25, with the length of 6000 meters and the width of 1000 meters.	For large vessels.			
Berthing area №.7		South side of Changjiang red buoy №.32 and №.35, with the length of 3000 meters and the width of 400 meters.	For large vessels.			
Berthing area №.8		North side of Changjiang black buoy №.34 and 37, with the length of 4500 meters and the width of 1000 meters.	For large vessels.
